

LIGHTPAPER v1.1

Cancer is still one of the leading causes of death around the world. According to the International Agency for Research on Cancer, there were nearly 10 million deaths in 2020.

Crypto Against Cancer (\$CAC) has been created by experienced members of the crypto community who wanted to make a real impact to cancer research and treatment around the world.

1.5% of all transactions will be constantly donated towards cancer treatment (hospitals, research, treatment).

**Cancer is like any other challenge we face in our lives,
and we should never give up...**

Let's fight and win!

HOLD AND EARN \$BNB

Crypto Against Cancer (\$CAC) is one of the first tokens to reward holders with BNB through a reward pool, automatically generated through the smart contract.

On every buy or sell, 8.5% is collected and added to the contract's BNB reward pool.

Token holders can claim from the pool daily, or every 7 days, based on the amount of \$CAC they hold.

As an example, if a holder has 1% of CAC's total supply, then they are able to collect 1% of the BNB held within the smart contract's reward pool!

The smart contract is designed to manage this without developer intervention. It is locked in the contract code and not accessible by developers!
